Artificial Intelligence in Modern Computing

Lab Task 05 - Academic Presentation

Submitted by: Muhammad Rehan (CMS: 608357)

Key Applications of AI

- Machine Learning & Deep Learning algorithms for predictive analysis.
- Natural Language Processing (NLP) in virtual assistants and chatbots.
- Computer Vision in medical imaging, autonomous vehicles, and security.
- Robotics and Automation in smart manufacturing and logistics.

Comparison of AI Domains

Domain	Primary Focus	Key Techniques
Machine Learning	Data Patterns & Predictions	Regression, Decision Trees, SVM
Deep Learning	Neural Network Architectures	CNN, RNN, Transformers
Computer Vision	Visual Data Understanding	Object Detection, Segmentation

Global AI Market Growth (in Billions USD)

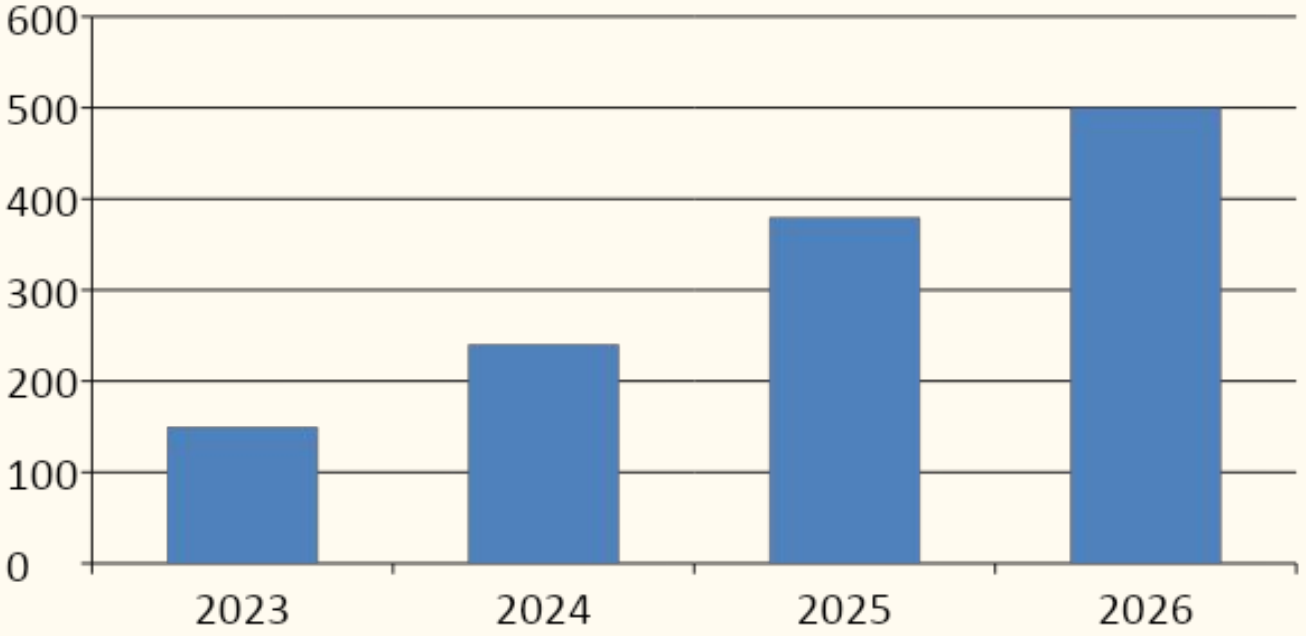

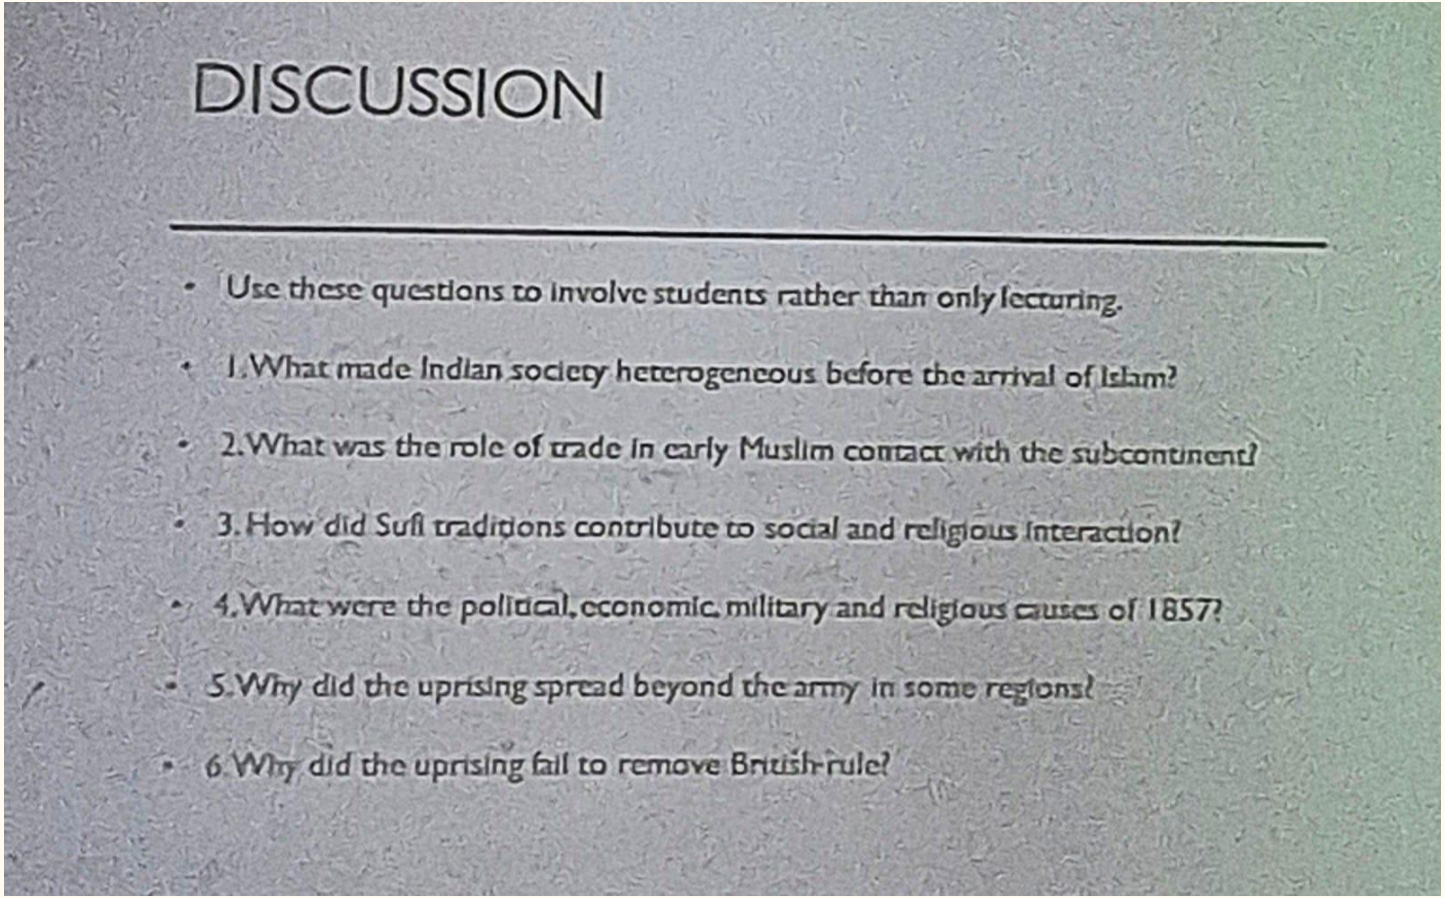

Image Random

Conclusion & Summary

AI continues to transform industries rapidly through data-driven decisions and advanced automation. Continued research and ethical deployment are essential for sustainable growth.
